### Perception

**When we interact with nature from our hearts, by applying our consciousness, by becoming one with the source of all that is, then our perception expands.**

Our perception changes also when we become capable to see more possibilities, simultaneously. How many other possibilities do you see in the the image? Do you perceive the object and its room also moving?

By applying an advanced capacity of perception, self-awareness and heart based consciousness in combination to our knowledge of nature principles and life organic self-sustained and sustainable development, we access to more possibilities and abilities, options, for our continuous development.
